Color coordinated bite block for easy identification of specific airway size.
Individually wrapped

ONE-PIECE GUEDEL AIRWAYS

By using the latest technology we have produced the first major breakthrough in Guedel Airway design in thirty years. We have combined two materials with very different physical characteristics into one moulding, resulting in the elimination of the separate bite block found in all conventional Guedel Airway designs. This breakthrough offers enhanced patient safety while incorporating a soft tip to further reduce patient trauma.

Premium Performance, Maximum Safety

Litholyme™ is a new CO_2 absorbent that eliminates the common concerns with traditional soda lime based products in that it eliminates the potential for production of compound A, carbon monoxide, and excessive heat. Its patented formula does not contain any NaOH or KOH, and features a permanent color change that will not revert over time.

Suitable for low flow applications, Litholyme is minimally exothermic, and its patented formula does not interact with sevoflurane or other commonly used inhalation anesthetic agents, even under fully desiccated conditions.

Litholyme features a permanent and profound white-to-violet color change that will indicate exhaustion or desiccation, eliminating the possibility for inadvertent use of expended product. Additionally, the deep violet color of exhausted or desiccated product will not fade or revert over time.

Efficient Canister Life
Litholyme has efficient CO_2 absorption properties which allow it to last as much as 30% longer than other premium CO_2 absorbents, making it the most cost effective option for a premium absorbent.

MURPHY WITH CUFF ENDOTRACHEAL TUBES

Introducing the all new Endomask Eclipse 100% Disposable Silicone Laryngeal Mask Airway. Finally an LMA that combines patient comfort and ease of use at an economical price.

Superior Silicone Cuffs that conform to the natural contours of the hypopharynx for a perfect fit, allowing rapid, blind insertion, excellent seal and single hand ventilation. Cuffs are thick and durable with a smooth matte finish.

No epiglottic bar (aperture bar) obstructions enable easy access for a fiberscope and suction catheters.

Top quality inflation lines with self-sealing pilot balloons. The cuff assembly and tube body is smoother and has less voids and impurities within its structure than other silicone laryngeal masks.

■ **A revolutionary, single use supraglottic airway**

i-gel® and natural airway management – The i-gel is a truly unique airway device that represents the culmination of years of extensive research and development. Everything about the i-gel has been designed to work in perfect unison with the anatomy; the i-gel design was inspired by the physiology of the perilaryngeal framework itself – airway management as nature might have intended.

i-gel mirrors the anatomy – The shape, softness and contours accurately mirror the perilaryngeal anatomy to create the perfect fit. This innovative concept means that no cuff inflation is required. The i-gel works in harmony with the patient's anatomy so that compression and displacement trauma are significantly reduced or eliminated.

The non-inflating cuff – i-gel gets its name from the soft gel-like material from which it is made. It is the innovative application of this material that has enabled the development of a unique non-inflating cuff. This key feature means insertion of i-gel is easy, rapid and consistently reliable.

The simple, safe and rapid solution – i-gel is incredibly easy to use. With a non inflating cuff, i-gel provides a safe and rapid airway management solution.

PROVU VIDEO LARYNGOSCOPE

ProVu Video Laryngoscope Blade and Handle are single-use, limiting handling of a contaminated device and reducing the risk of cross contamination. The ProVu Display can be easily disinfected using standard disinfectors, so the product is free from contamination and ready to use for the next patient. The ProVu Laryngoscope imaging system has a focal length, field of view and illumination field optimized for an improved view of the glotic anatomy. Combined with excellent color rendition, blackout and blindspot reduction technology, ProVu Video Laryngoscopes reduce the shadowing effect of an ET tube when inserted in the upper airway. Other features include: 70 degree tilt screen, Plug and Play,100% all metal blade and Anti-fog design.
